COMPACT DISC PLAYER

PD-6010(BK)

PD-6010

MODEL PD-6010 COMES IN FOUR VERSIONS DISTINGUISHED AS FOLLOWS.

Type	Applicable model		Power requirement	Destination
	PD-6010[BK]	PD-6010		
KU	○	—	AC120V only	U.S.A.
KC	○	—	AC120V only	Canada
HEM	○	○	AC220V	European continent
HB	○	○	AC240V	United Kingdom

- This service manual is applicable to the PD-6010/KU, KC, HEM and HB types.
- As to the KC, HEM and HB types please refer to pages 86 – 87.
- As to the circuit and mechanism descriptions, please refer to the PD-9010X service manual (ARP-883).
- Ce manuel d'instruction se réfère au mode de réglage, en français.
- Este manual de servicio trata del método de ajuste escrito en español.

1. SAFETY INFORMATION

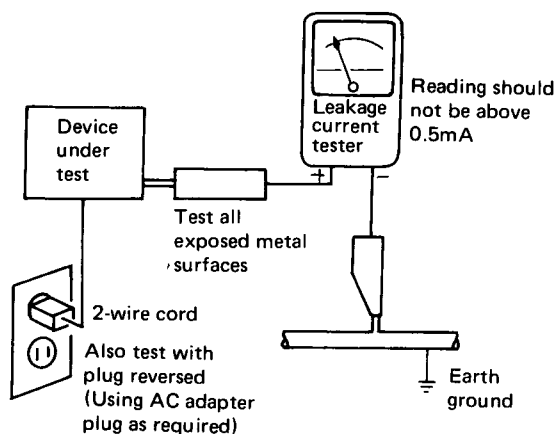

(FOR MODEL KU ONLY)

1. SAFETY PRECAUTIONS

The following check should be performed for the continued protection of the customer and service technician.

LEAKAGE CURRENT CHECK

Measure leakage current to a known earth ground (water pipe, conduit, etc.) by connecting a leakage current tester such as Simpson Model 229-2 or equivalent between the earth ground and all exposed metal parts of the appliance (input/output terminals, screwheads, metal overlays, control shaft, etc.). Plug the AC line cord of the appliance directly into a 120V AC 60Hz outlet and turn the AC power switch on. Any current measured must not exceed 0.5mA.

AC Leakage Test

ANY MEASUREMENTS NOT WITHIN THE LIMITS OUTLINED ABOVE ARE INDICATIVE OF A POTENTIAL SHOCK HAZARD AND MUST BE CORRECTED BEFORE RETURNING THE APPLIANCE TO THE CUSTOMER.

2. PRODUCT SAFETY NOTICE

Many electrical and mechanical parts in the appliance have special safety related characteristics. These are often not evident from visual inspection nor the protection afforded by them necessarily can be obtained by using replacement components rated for voltage, wattage, etc. Replacement parts which have these special safety characteristics are identified in this Service Manual.

Electrical components having such features are identified by marking with a Δ on the schematics and on the parts list in this Service Manual.

The use of a substitute replacement component which does not have the same safety characteristics as the PIONEER recommended replacement one, shown in the parts list in this Service Manual, may create shock, fire, or other hazards.

Product Safety is continuously under review and new instructions are issued from time to time. For the latest information, always consult the current PIONEER Service Manual. A subscription to, or additional copies of, PIONEER Service Manual may be obtained at a nominal charge from PIONEER.

QUESTIONNAIRE

MODEL

One Model per questionnaire

Dear Servicer,

Thank you for your cooperation in the post-sale service of Pioneer products.

This questionnaire is used as a tool to improve the serviceability of our products and service manuals. Please evaluate this model and service manual by answering the following questions. Your ideas may be realized in our future products. Your answers will be appreciated. Thank you.

PIONEER ELECTRONIC CORP.

2. SPECIFICATIONS

1. General

Type	Compact disc digital audio system
Usable discs	Diameter 120 mm Thickness 1.2 mm
Maximum playing time: 60 minutes or more (stereo)	Linear speed: 1.2 ~ 1.4 m/sec
Rotation direction (signal side): Counterclockwise	
Signal format	Sampling frequency: 44.1 kHz Sampling bit number: 16 bit linear
	Transmission bit rate: 4.3218 Mbit/sec.
	Modulation system: EFM
	Error correction system: CIRC
	Preemphasis: 50/15 μ sec (during use)
Laser used	Semiconductor laser: wavelength 780 nm
Power requirements	
HEM model	AC 220V, 50, 60 Hz
HB model	AC 240V, 50, 60 Hz
KU, KC models	AC120V, 60 Hz
Power consumption	
HEM, HB models	17 W
KU, KC models	16 W
Operating temperature	+5°C ~ +35°C
Weight	4.8 kg (10 lb 9 oz)
External dimensions	420(W) x 310(D) x 91(H)mm 16-1/2(W) x 12-1/5(D) x 3-3/5(H)in

2. Audio section

Frequency response	2 Hz ~ 20 kHz \pm 0.5 dB
S/N	96 dB (1 kHz)
Dynamic range	95 dB (1 kHz)
Channel separation	93 dB (1 kHz)
Wow and flutter	Quartz oscillator accuracy
Total harmonic distortion	0.002% (1 kHz, 0 dB)
Total harmonic distortion and noise	0.004% (1 kHz, 0 dB)
Output voltage	2 Vrms (1 kHz, 0 dB)
Channels	2-channel (stereo)

3. Functions

- Play
- Manual search
- All-track repeat
- Programmed playback
- Programmed repeat
- Pause
- Track search
- Initial play from selected track

* The above functions can be controlled via remote control.

4. Accessories

- Remote control unit 1
- Batteries (AAA/R03) 2
- Pin-plug audio cable 1
- Operating Instructions 1

NOTE:

Specifications and design subject to possible modification without notice, due to improvements.

3. PANEL FACILITIES

REAR PANEL

① AUDIO OUT terminals

② Power cord

③ AC OUTLET (UNSWITCHED, MAX. 100W)

[Only U.S.A. model is provided with this outlet. Other models are not provided with this outlet.]

- Power is continuously supplied to the component connected here, regardless of the setting of the power switch (ON/OFF). Turn the connected component ON/OFF by using its own power switch.
- Do not connect any component having a power consumption exceeding 100W.

NOTE:

- Never connect any appliance (toaster, hair dryer, etc.) whose power consumption exceeds the wattage (W) noted on the outlet panel. Damage to components or fire hazards could result.
- Even if a television set has a rated power consumption less than the permissible outlet wattage, when its power is first turned on it may have a temporary electrical current flow that exceeds the permissible value. For this reason, do not connect television sets or monitors to this outlet.

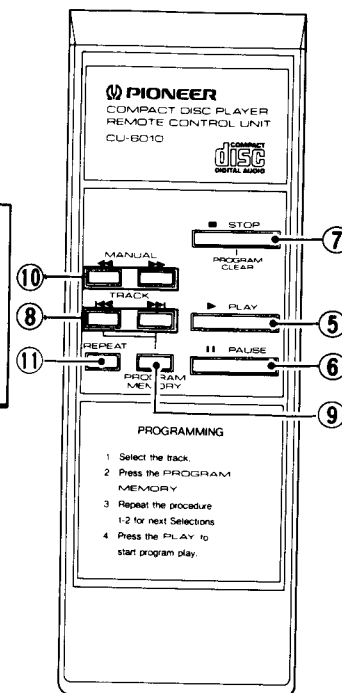

④ SUBCODE OUT terminal

This terminal will be used for outputting subcodes (data recordable on compact discs together with audio signals) in future audio applications.

FRONT PANEL

REMOTE CONTROL UNIT

① POWER switch

Press to turn power to the unit ON and OFF.

② Disc tray

Compact discs are loaded here. When the power is turned on and the OPEN/CLOSE switch is pressed, the disc tray opens toward the front. To close the tray, either press the OPEN/ CLOSE switch again, or push the tray in manually.

③ OPEN/CLOSE switch

Press to open or close the disc tray. The disc tray alternately opens and closes each time the switch is pressed.

④ Indicators

- Ⓐ PROGRAM : Lights after tracks are programmed.
- Ⓑ TRACK : Indicates the number of the track currently playing or being programmed.
- Ⓒ PLAY : Lights during playback.
- Ⓓ PAUSE : Lights during the pause mode (playback has been temporarily interrupted).
- Ⓔ REPEAT : Lights during repeat play.
- Ⓕ REMOTE CONTROL :
: Lights when a command signal is received from the remote control unit.

⑤ PLAY key

Press to begin playback, and to release the player from the pause mode.

⑥ PAUSE key

Press to temporarily interrupt playback. When pressed again, the player is released from the pause mode.

⑦ STOP/CLEAR key

Press to stop playback. When pressed, all operations stop. Also, when the player is in the stop mode, press this key to cancel memorized contents of programmed play.

⑧ TRACK SEARCH keys

When the player is in the normal play or programmed play modes, or during the pause mode, these keys are pressed to perform search for a desired track. When pressed, the disc will be advanced to the next track, or reversed to the previous track.

[▶] : When pressed once, the disc playback advances to the beginning of the next track; when pressed continuously, the disc playback moves to the beginning of succeeding tracks on the disc (during programmed playback, it moves to the beginning of the next programmed track).

[◀] : When pressed once, the disc playback returns to the beginning of the currently playing track; when pressed continuously, the disc playback moves further in reverse to the beginning of previous tracks on the disc (during programmed playback, it returns to the beginning of the previously programmed track).

⑨ PROGRAM key (PROGRAM MEMORY)

Use to memorize desired programs for programmed playback. Press this key after selecting a desired track with the track search key. Tracks will be memorized in the order the keys are pressed.

⑩ MANUAL SEARCH keys

These keys are pressed to perform fast forward and fast reverse when the player is in the play or pause mode. The function operates only during the time the keys are held depressed; if the keys are held depressed for three seconds or more, the speed increases.

[▶▶] : Fast forward is performed (if end of disc is reached, player enters the pause mode).

[◀◀] : Fast reverse is performed (if beginning of disc is reached, player enters the pause mode).

During programmed play, the player will enter the pause mode just before moving to the next (or previous) track.

⑪ REPEAT key

Press to perform repeat playback.

- When pressed during the normal playback mode, all tracks on the disc will be played back repeatedly.
- During programmed playback, the programmed tracks will be played back repeatedly in the programmed order.

⑫ REMOTE CONTROL SIGNAL RECEIVER (REMOTE SENSOR)

⑬ PHONES terminal

When using headphones, connect their plug here.

Player operations and corresponding indicator displays

Operating mode	Indicator display		Comments
	TRACK	Other	
Power ON Disc tray OPEN	0 0		After OP display, 00.
Disc tray CLOSE	Total number of tracks		Displayed for 4 seconds only, thereafter same as "Stop" mode.
Stop mode	0 1		4 seconds after TOC is read. At end of playback, when STOP/CLEAR key is pressed.
Playback mode (Play, Program, Repeat) Pause mode	Currently playing track no.	<ul style="list-style-type: none"> • During playback, PLAY lights; during pause, PAUSE lights. • During programmed or repeat playback, PLAY or PAUSE lights. Depending on play mode, PROGRAM or REPEAT lights.	

4. PARTS LOCATIONS

NOTES:

- The Δ mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.
- For your Parts Stock Control, the fast moving items are indicated with the marks $\star\star$ and \star .
 $\star\star$ GENERALLY MOVES FASTER THAN \star
 This classification shall be adjusted by each distributor because it depends on model number, temperature, humidity, etc.

Fig. 5-2 Disassembly

• Disctable Assembly Procedures

When the disc table is remounted by pressure insertion, always make contact with the stopper below the spindle motor, insert a spacer ($\phi 4\text{mm}$ hexagonal wrench, etc.) to ensure that the gap between the disc table and mechanism chassis is as shown in Figure 5-3, and apply pressure from directly above. (Pressure of approx. 9kg.)

NOTE:

$\phi 4\text{mm}$ hexagonal wrench is included hexagonal wrench set. (No. GGH-003).

7.2 SCHEMATIC DIAGRAM

NOTE:

1. RESISTORS:

Indicated in Ω , $\frac{1}{2}W$, $\frac{1}{4}W$, $\pm 5\%$ tolerance unless otherwise noted k; k Ω , M; M Ω , (F); $\pm 1\%$, (G); $\pm 2\%$, (K); $\pm 10\%$, (M); $\pm 20\%$ tolerance

2. CAPACITORS:

Indicated in capacity (μF)/voltage (V) unless otherwise noted p; pF. Indication without voltage is 50V except electrolytic capacitor.

3. VOLTAGE

 : DC voltage (V) at no input signal

4. OTHERS:

 : Signal route.

 : Adjusting point.

The  mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.

* marked capacitors and resistors have parts numbers.

This is the basic schematic diagram, but the actual circuit may vary due to improvements in design.

• List of Symbols

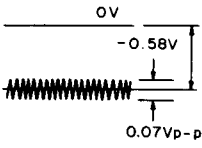

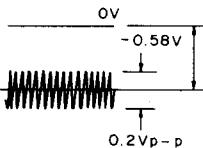

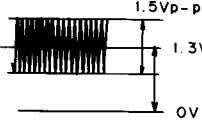

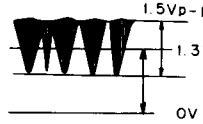

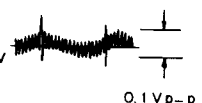

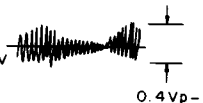

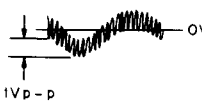

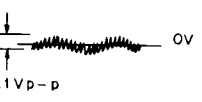

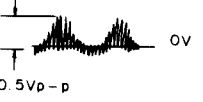

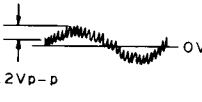

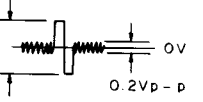

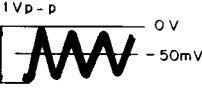

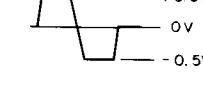

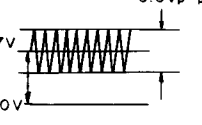

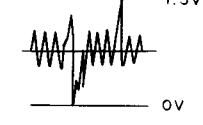

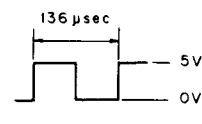

Symbol	Signal Source	Signal Name	Function
A			Tracking signal lead code detector
A0~A10	IC9-38~48	Address line	
APCG	IC1-6	APC GND	
B1~B4			Output from 1/4 divider detectors used to detect RF and focus signals
BCLK	IC9-76	Bit clock	
C			Tracking signal end code detector
C·OUT	IC6-6	Counter out	Track count signal pulse
C1F1	IC9-62	Error flag	Flags indicating when decoder LSI is correcting errors
C1F2	IC9-63	Error flag	
C2F1	IC9-64	Error flag	
C2F2	IC9-65	Error flag	
CA·DR	IC3-2	Carriage drive	Carriage motor drive output
CLK	IC12-27	Clock	IC6 and IC9 control data (serial) clock
CLMP	S102	Clamp	Disc tray status (L: closed, H: open or moving)
CRCF	IC9-20		Sub-code Q error detection result output (synchronized with SCOR signal)
CS	IC9-50	Chip select	RAM activator control signal
D1~D8	IC9-37~34 32~29	Data line	RAM data line
DATA	IC9-78	Data	DAC playback signal data (serial)
DEMP	IC12-24	De-emphasis	De-emphasis on/off signal (L: de-emphasis ON)
DIRC	IC12-13	Direct	Control signal involved in single track jumping (control only while signal is at L level)
EXCK	IC9-21	External clock	External clock input
FG DW	IC12-15	Focus gain down	Control signal for reducing focus servo gain
FO·DR	IC2-2	Focus drive	Focus actuator drive signal
FO·ER	IC5-16	Focus error	Focus error signal
FO·IN	TP1-6	Focus loop in	Focus servo gain adjustment input
FO·OT	TP1-1	Focus loop out	Focus servo gain adjustment output
FO·RT	TR1-8	Focus	Focus actuator drive current detector
FOK	IC5-1	Focus OK	H level output to indicate that "in focus" status is set when RF signal is obtained
GFS	IC9-28	GFS	Frame sync lock status output (H: locked)
GND		GND	
INSD	S101	Inside	Detector signal indicating that pick-up has reached inside track
K			
KD0~KD5	IC11 9~12 15, 17	Key data	Key on/off matrix encoded data
K \overline{S}	IC201-11	Key st	Output indicating that key has been pressed (L output when key is ON)
L·IN	IC12-26	Loading in	Loading-in control signal
L·OUT	IC12-28	Loading out	Loading-out control signal
LD ON	IC12-10	Laser diode	Laser diode switching signal (H: diode ON)
LOAD +	IC4-2		Loading motor drive voltage output
LOAD -	IC4-10		
LRCK	IC9-80	LR clock	Clock (44.1kHz) for switching decoder (DAC) left/right channels

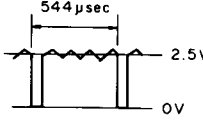

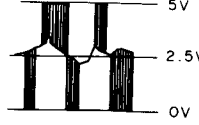

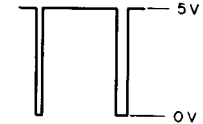

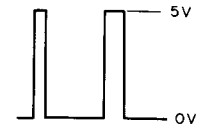

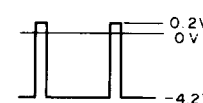

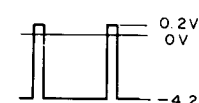

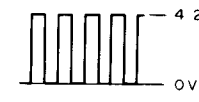

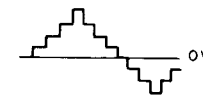

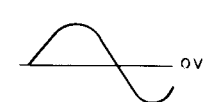

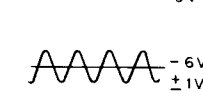

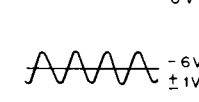

*1: Also used in 10-track jumping in PD-6010

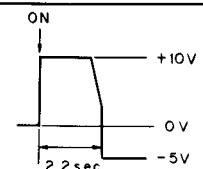

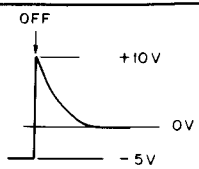

Symbol	Signal Source	Signal Name	Function
MIRR	IC5-18	Mirror	Pitless side (mirror surface) detector signal (pitless side: H)
MRIH	IC12-14	Mirror inhibit	Control signal which inhibits transfer of MIRR signal from IC5 to IC9
MUTE	IC12-19	Muting	IC9 digital mute control signal
OPEN	S102	Open	Output from switch which detects when disc tray is open (open: L)
RAOV	IC9-57	RAM overflow	Output signal generated when RAM area overflow occurs (overflow: H)
RESET	Q11-C	Reset	Power ON reset signal
RFCK	TP4-7(IC9, 25)	Read frame clock	Standard frame clock signal (7.35kHz)
RMKS	IC12-58	Remote control key	Remote control key strobe passed from remote control decoder (IC11) to main microprocessor (IC12)
SBS0	IC9-22		Sub-code serial output
SCK	IC12-55	Serial clock	FL display data transfer clock
SCLK	IC13-4	System clock	Audio playback system clock
SC0R	IC9-24		Sub-code sync
SD	IC12-56	Serial data	Control signal passed to FL control CPU
SENS	IC6-5		Detector output bus from IC6 & IC9
SP·DR	CN4-5	Spindle drive	Spindle motor drive output
SP·RT	CN4-6	Spindle return	Spindle motor drive current detector
SRES	IC12-57	Serial reset	Key/display/microprocessor reset signal
STS	IC201-21	Status	Display data "ready to send"
SUB0	IC9-23	Sub-code Q	Sub-code Q output (address and other data)
TR·DR	IC2-8	Tracking drive	Tracking actuator drive signal
TR·ER	IC5-17	Tracking error	Tracking servo error output
TR·IN	TP1-7	Tracking loop in	Tracking servo gain adjustment input
TR·OT	TP1-2	Tracking loop out	Tracking servo gain adjustment output
TR·RT	TP1-9	Tracking return	Tracking actuator drive current detector
WCLK	IC13-21		Digital filter 88.2kHz strobe signal input
WDCK	IC9-79		Digital filter 88.2kHz strobe signal output
WE	IC9-49	Write enable	RAM write enable
WFCK	IC9-25	Write from clock	Frame clock signal made from data (frame sync. lock: 7.35kHz)
XLT	IC12-16		Servo and decode IC serial data latch clock pulse signal

9. ELECTRICAL PARTS LIST

NOTES:

- When ordering resistors, first convert resistance values into code form as shown in the following examples.

Ex. 1 When there are 2 effective digits (any digit apart from 0), such as 560 ohm and 47k ohm (tolerance is shown by J=5%, and K=10%).

560Ω 56 × 10¹ 561 RD½PS 561 J
 47kΩ 47 × 10³ 473 RD½PS 473 J
 0.5Ω 0R5 RN2H 0R5 K
 1Ω 010 RS1P 010 K

Ex. 2 When there are 3 effective digits (such as in high precision metal film resistors).

5.62kΩ 562 × 10¹ 5621 RN½SR 5621 F

- The  mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.

- For your Parts Stock Control, the fast moving items are indicated with the marks ★★ and ★.

★★ GENERALLY MOVES FASTER THAN ★

This classification shall be adjusted by each distributor because it depends on model number, temperature, humidity, etc.

10. TROUBLESHOOTING

Defective power supply

Check for breaks in solder bridge pattern

Check power switch and power cord

120V/60Hz TYP values

	IN	OUT
IC21	+16 ~ 17V	+12V
IC22	-16 ~ -17V	-12V
IC23	+10 ~ 11V	+5V
IC24	-10 ~ -11V	-5V
Q23	Collector -30V to -33V	Emitter -26V

Power on /off switching noise

Is the Q21 collector at H level (about +10V) when the power is switched on or off?

NO

Check D9 thru D12, C131, C132, and R155 thru R158 for solder bridges and other soldering faults

YES

Check Q17 thru Q20 and R155 thru R158 for solder bridges and other soldering faults

TYP values

Is the Q11 collector at H level?

NO

Is the D9 anode about -6V?

NO

Check R167 thru R173, D11 and D12, and C131 for solder bridges and other soldering faults

YES

Is input applied to IC6, IC9, IC11, and IC12?

NO

Check around R120, Q11 and C73 for solder bridges and other soldering faults

YES

Is the reset time constant normal?

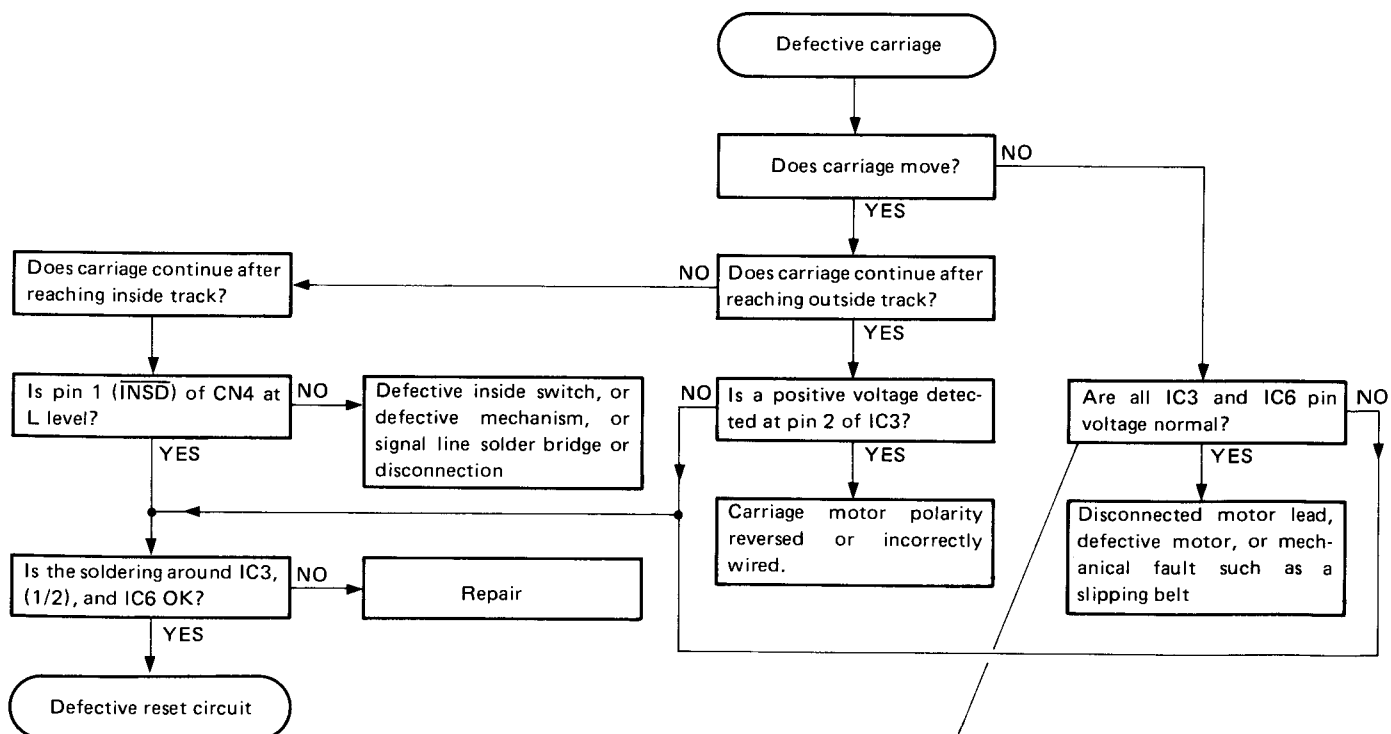

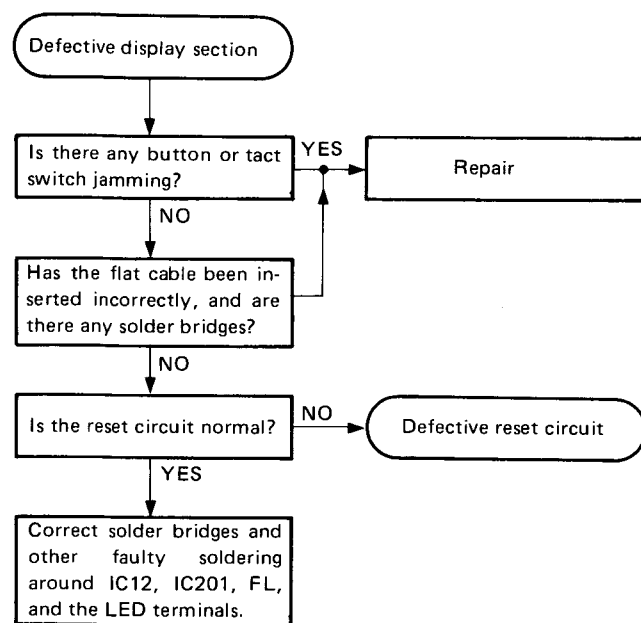

NO

Check for solder bridges, pattern cracks, and other soldering faults

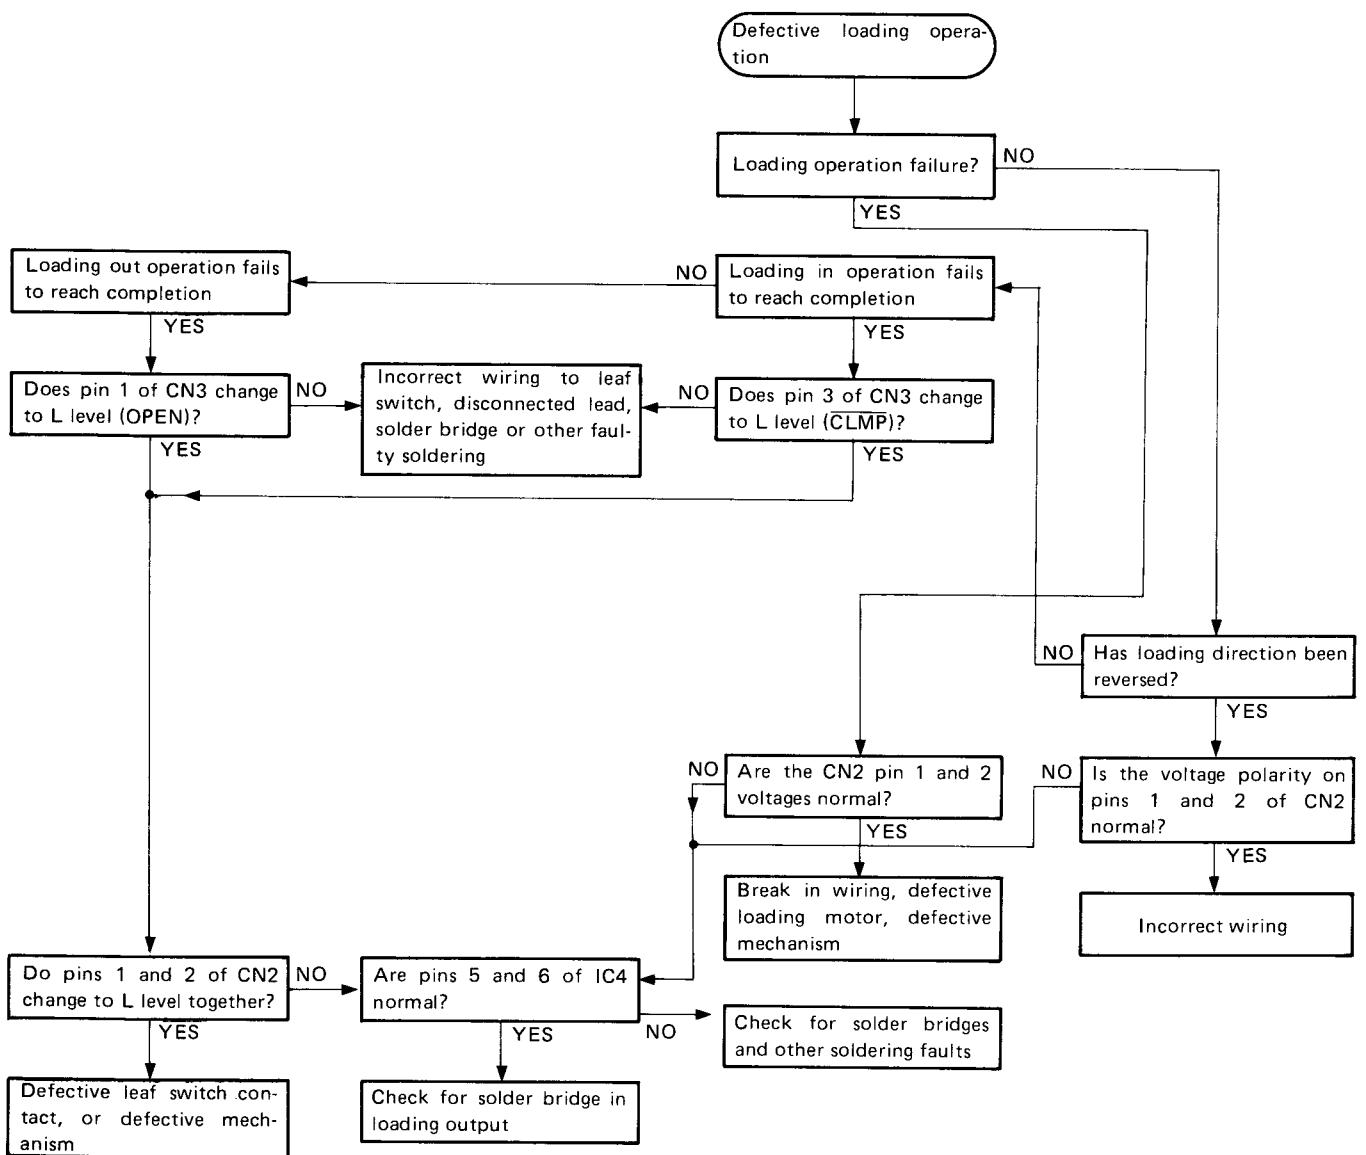

Check around R118, R121 and C74 for solder bridges and other soldering faults

YES

Normal

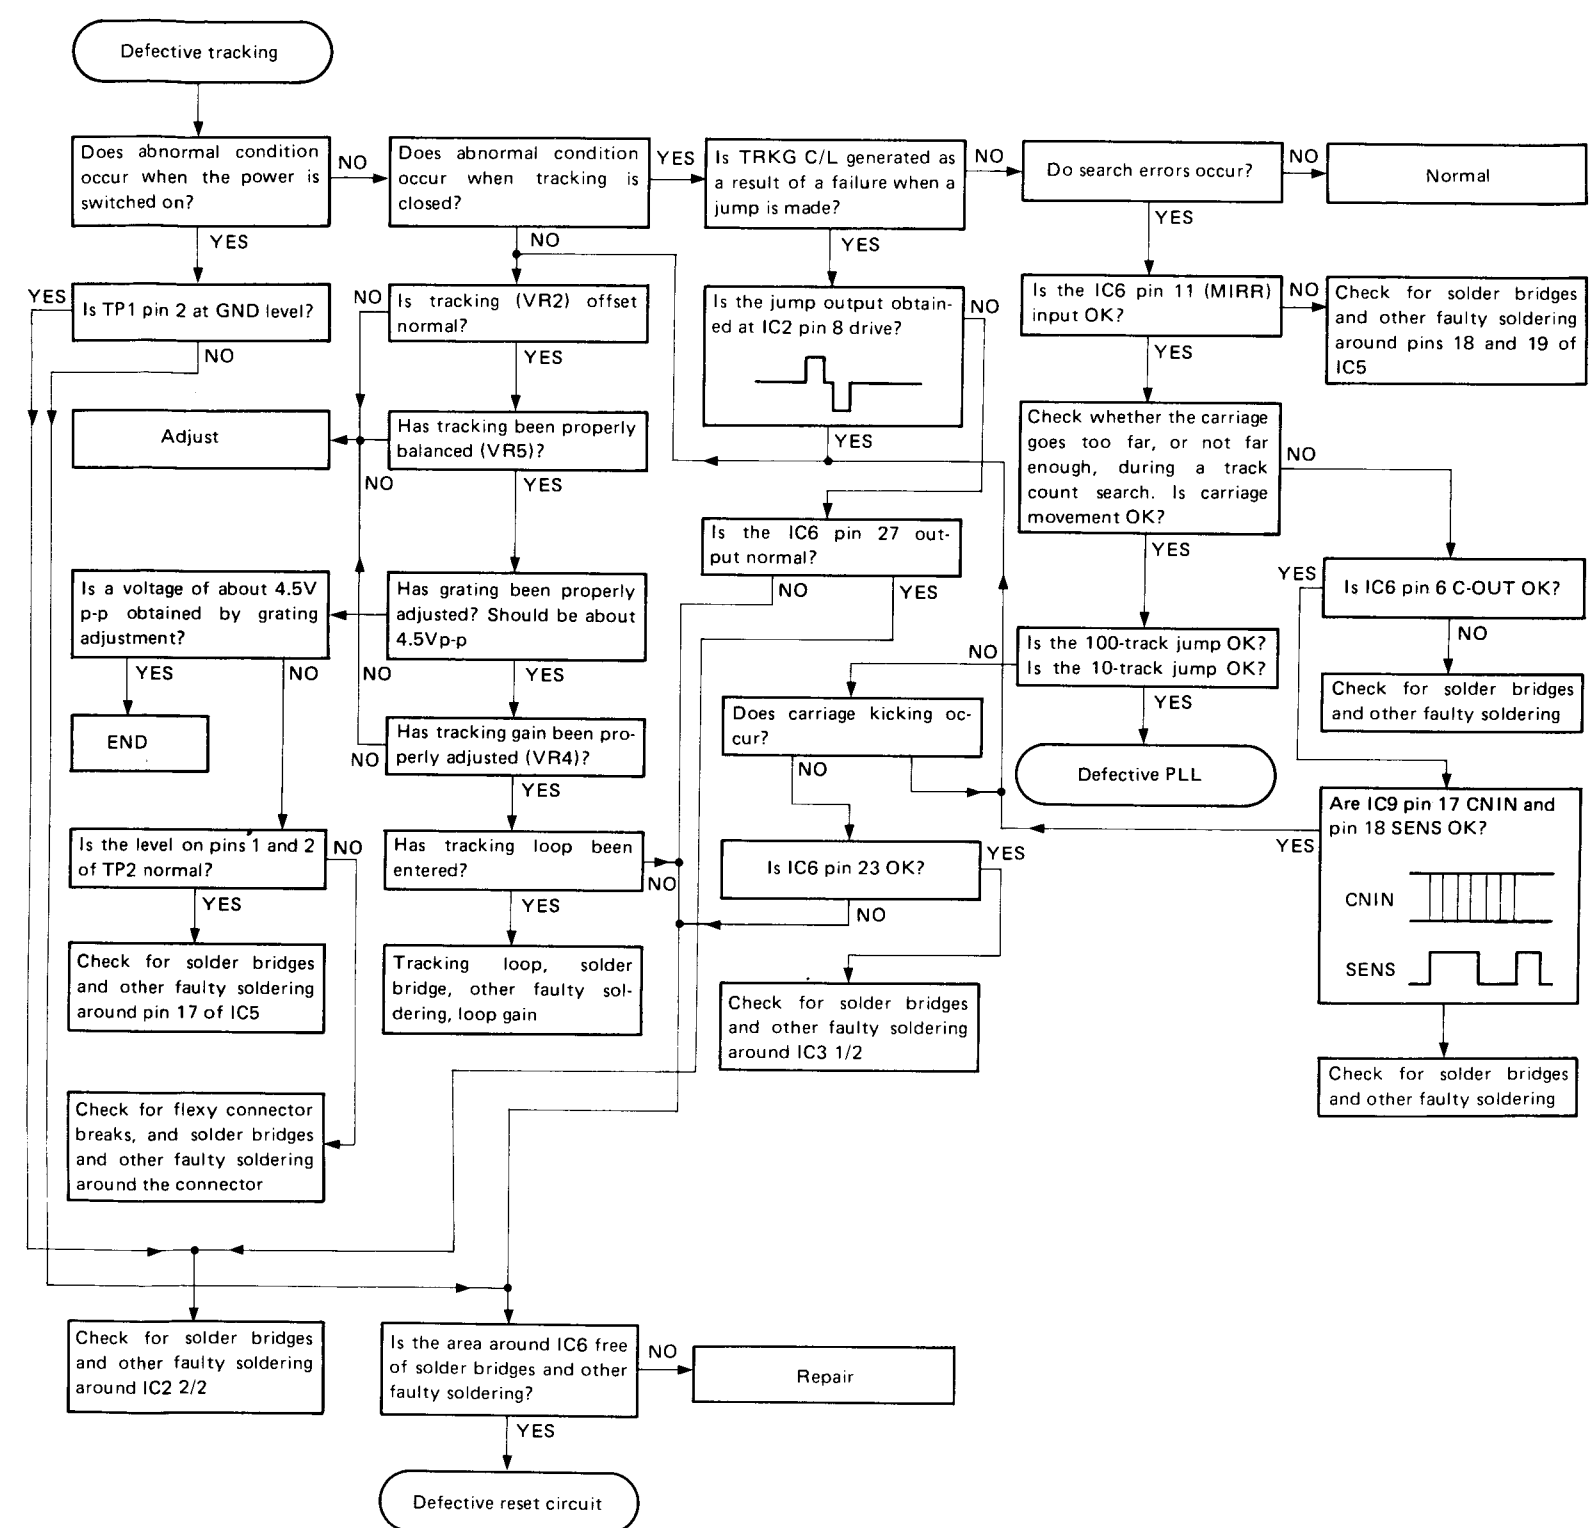

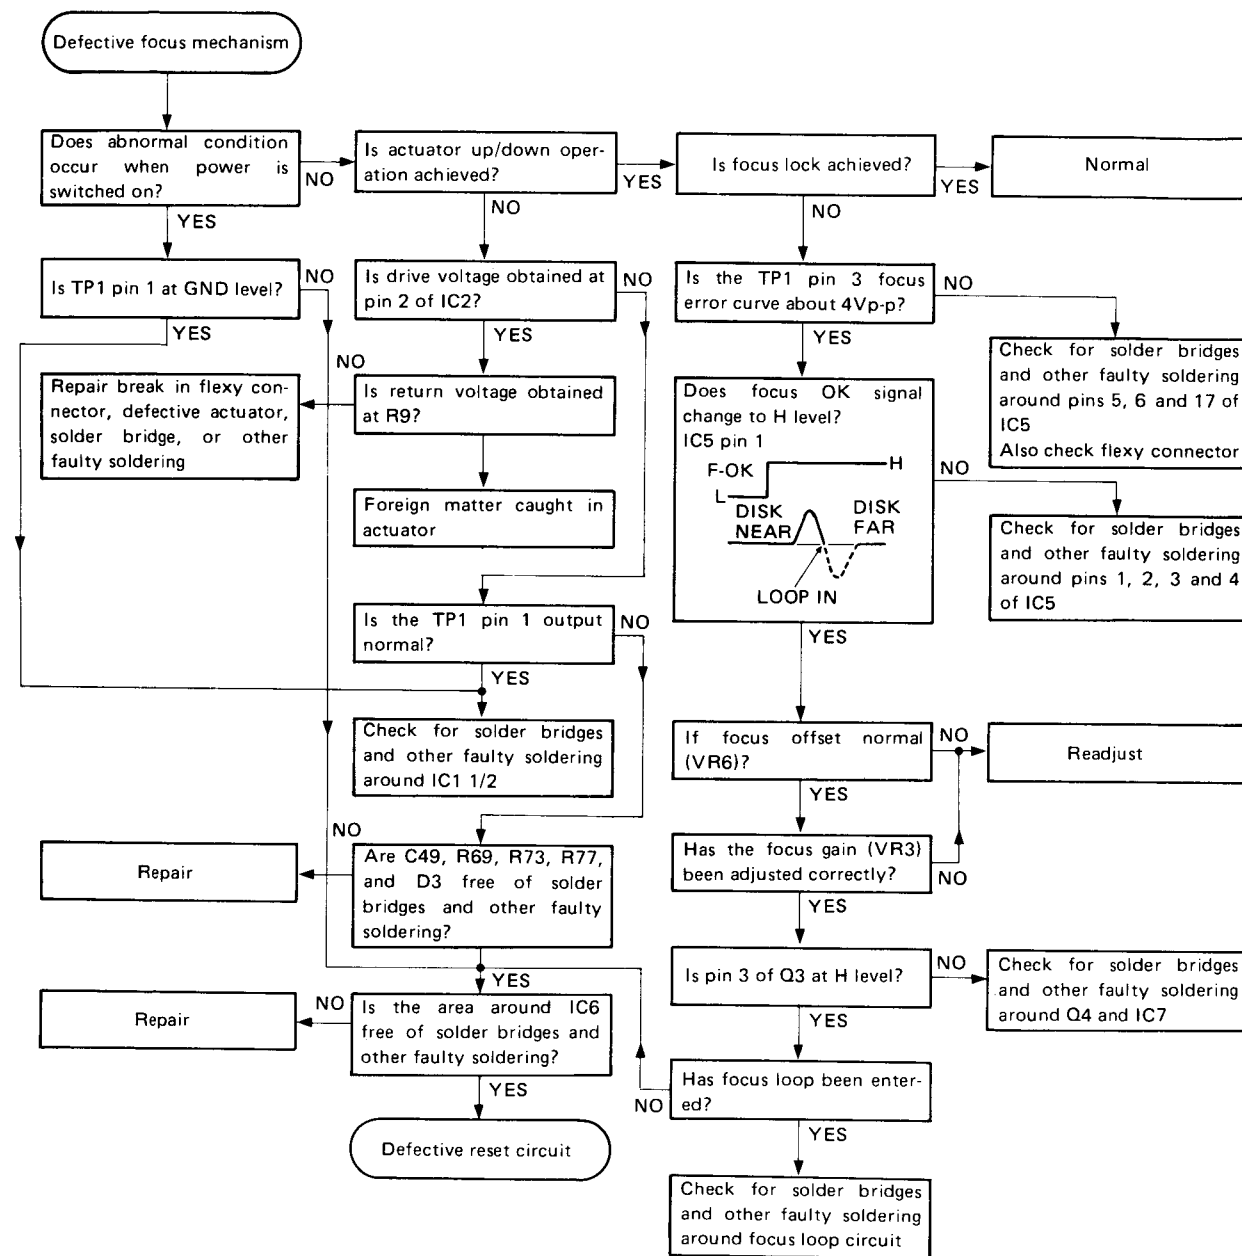

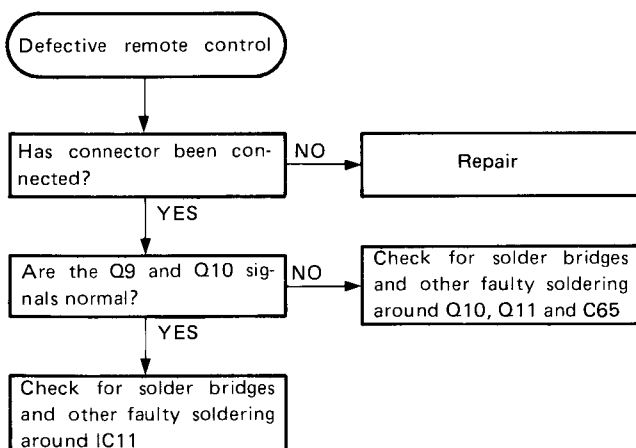

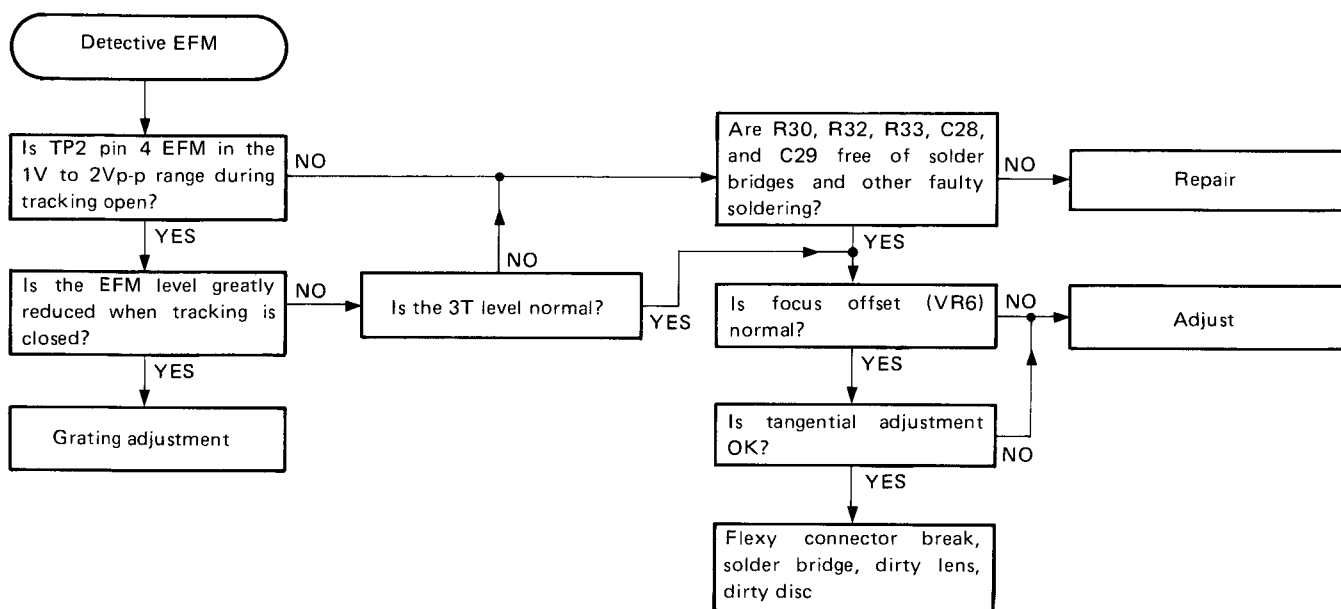

Point Mode	IC3 2 Pin	IC6 23 Pin
Playback	+1 ~ -2V	+0.09 ~ -0.18V
Forward (outer tracks)	-9 ~ -11V	-0.8 ~ -1V
Reverse (inner tracks)	+9 ~ +11V	+0.8 ~ 1V
Stop	0V	0V

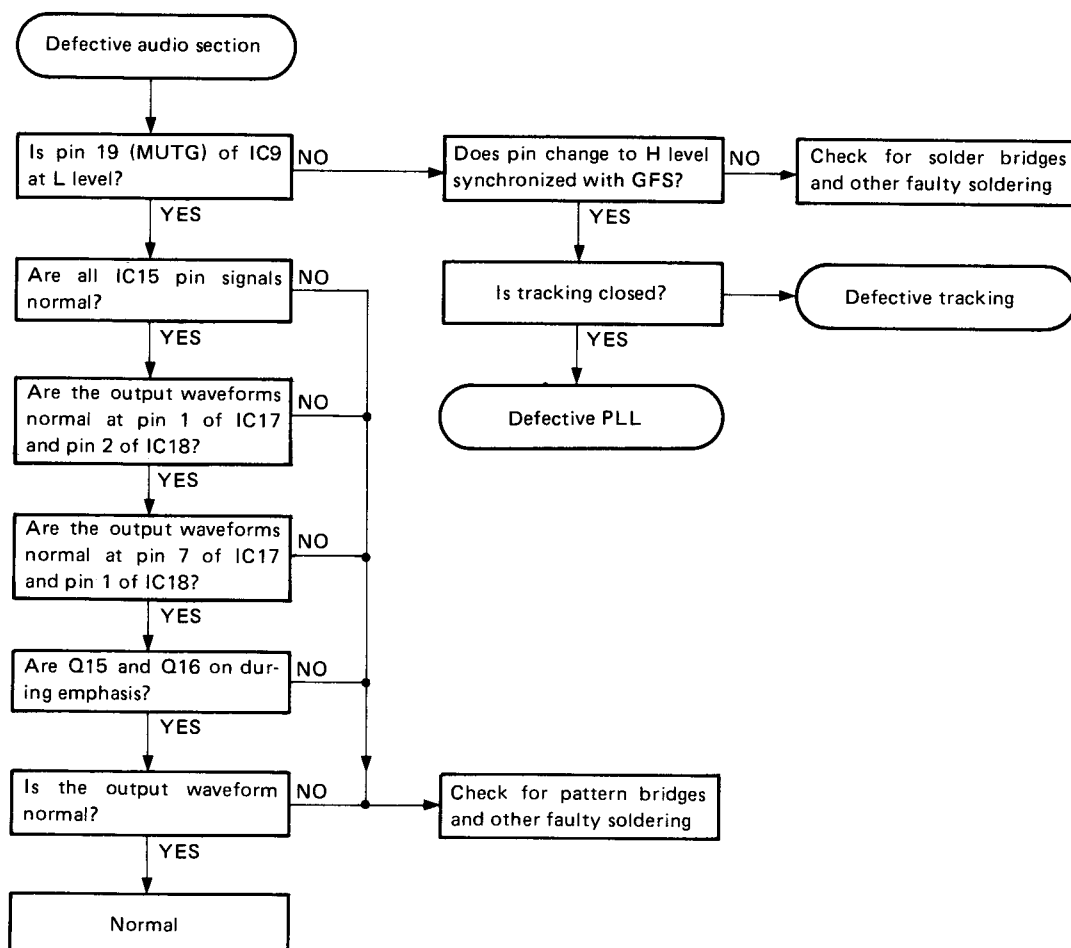

Point Mode	IC4 5 Pin	IC4 6 Pin	CN2 1 Pin	CN2 2 Pin
Loading in	L	H	0V	+8 ~ 10V
Loading out	H	L	+8 ~ 10V	0V
Loading in completed	H	H	0V	0V
Loading out completed	L	L	0V	0V

11. ADJUSTMENTS

The Compact Disc Player adjustment are to be executed in the following order.

● Adjustment Items

1. Tracking offset and focus offset adjustments
2. LD (laser diode) power check
3. Focus lock and spindle lock checks
4. Grating adjustment
5. Tracking balance adjustment
6. Tangential adjustment
7. Focus gain adjustment
8. Tracking gain adjustment
9. VCO free-run frequency adjustment

● Measuring Equipment

1. Dual trace oscilloscope
2. Optical power meter
3. Test disc (YEDS7)
4. Focus and tracking adjustment filters
5. Loop gain adjustment bandpass filter
6. Signal generator
7. Grating driver
8. Other regular measuring equipment

● Test Mode

Disc player adjustments are executed in test mode.

Test mode setting and cancellation procedures

- (1) Switch POWER (S401) on while depressing the TEST MODE switch (S1).
- (2) Then switch the MANUAL SEARCH FWD (\gg) or REV (\ll) switch on to activate test mode.
- (3) Test mode is cancelled by switching POWER off.

The various key functions during test mode are listed in Table 11-1.

● Adjustment Controls

- VR2: Tracking offset (TR.OF)
 VR3: Focus gain (FO.GA)
 VR4: Tracking gain (TR.GA)
 VR5: Tracking balance (TR.BL)
 VR6: Focus offset (FO.OF)
 VL1: VCO free run (VCO coil)

Fig. 11-1 Adjustment Points

During test mode, each servo mechanism can be closed and opened by separate operations. Consequently, each servo must be closed one at a time

(in serial sequence) to set play mode. Note that play mode is not activated by simply pressing the PAUSE key () during test mode.

Example: Switch from stop to play mode.

- The servo mechanisms comply with a serial sequence during test mode.

• Key Function in Test Mode

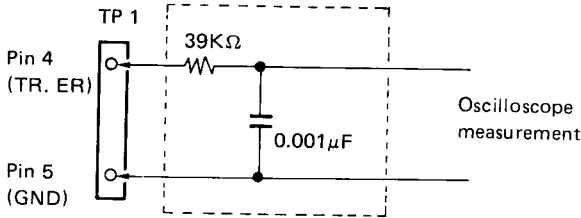

Symbol	Key	Function during test mode	Description
	TRACK FWD	Focus servo closed	Laser diode lights up, focus actuator is moved up/down, and focus servo is closed.
	PLAY	Spindle servo closed	Spindle servo closed in CLV-A mode after spindle motor is kicked.
	PAUSE	Tracking servo closed/opened	Tracking servo closed by pressing in a toggle action, and player is switched to play mode (with the focus and spindle servos closed). PAUSE indicator lights up, and tracking servo is opened when pressed a second time.
	MANUAL SEARCH REV	Carriage reverse (towards disc center)	Carriage is moved towards disc center at the fast speed of about 1cm/sec. Since there is no safety mechanism to stop the carriage, do not move it too far.
	MANUAL SEARCH FWD	Carriage forward (towards disc edge)	Carriage is moved towards disc edge at the fast speed of about 1cm/sec. Since there is no safety mechanism to stop the carriage, do not move it too far.
	REPEAT	Lens moved up/down	The laser diode lights up, and the focus actuator is moved up/down. The focus servo is not closed.
	STOP	Stop	All servos are stopped and reset to the initial status.
	OPEN/CLOSE	(Disc tray) opened/closed	Disc tray is opened/closed. Note pickup does not return to arm rest when tray is opened, and remains in the same position when tray is closed.

Table 11-1

Step No.	Oscilloscope position		Test points	Adjustment positions	Check items/ Adjustment specifications	Adjustment procedure
	V	H				
1	TRACKING OFFSET AND FOCUS OFFSET ADJUSTMENTS					
			TP 1 Pin 9 (TR. RT) TP 1 Pin 3 (FO. ER)	VR 2 (TR. OF) VR 6 (FO.OF)	0V ± 10mV 0V ± 10mV	<ul style="list-style-type: none">Set the player to test mode (see page 53)Adjust the voltage at TP1 pin 9 TR.RT (tracking return) to 0V ±10mV by turning the VR2 TR.OF (tracking offset) control.Adjust the voltage at TP1 pin 3 FO.ER (focus error) to 0V ±10mV by turning the VR6 FO.OF (focus offset) control.
2	LD (LASER DIODE) POWER CHECK					
				VR 1	Specified rating (0.26mW ± 0.02mW)	<ul style="list-style-type: none">Set to normal mode. (Normal mode can be set by switching the power off and on again.)Position the optical power meter sensor immediately above the object lens.Press the PLAY key without a disc loaded, and check that the LD (laser diode) power reading in the optical power meter is within the specified rating range (0.26mW ±0.02 mW).

6	TANGENTIAL ADJUSTMENT					
			TP2 pin 4 (RF output)	Tangential adjustment screw	Best eye pattern	<ul style="list-style-type: none">• Load the test disc.• Set the player to test mode (see page 53)• Using the MANUAL SEARCH FWD key (▷), move the pick-up to the disc edge to enable the tangential adjustment screw to be seen from the left hand side (see Figure 11-5).• Press the TRACK FWD (▷◁), PLAY (▷), and PAUSE (⏏) keys in that order to close all servos, (The PAUSE indicator will light up.)• Observe the TP2 pin 4 RF (RF output) in the oscilloscope and adjust the tangential adjustment screw to obtain the clearest eye pattern. (Figure 11-5).• The optimum position is the midpoint between the two positions where the eye pattern starts to deteriorate when the tangential adjustment screw is turned clockwise and counter clockwise. Guidelines for this adjustment: In addition to a clear overall waveform, adjust to obtain relatively slender lines (see photograph 11-8) Where single "diamond" shapes are formed in the eye pattern.• To make the waveform easier to observe, insert a 10 kohm resistance (or 5 kohm if the waveform is hard to see) in the tip of the probe as shown in Figure 11-4.

The diagram shows a probe connected to a circuit board. The probe's tip is connected to Pin 4 (RF) through a 10KΩ resistor. The probe's ground clip is connected to Pin 3 (GND). The probe is connected to an oscilloscope input.

11. RÉGLAGE

Les réglages du lecteur de disque compact s'effectuent de la manière suivante:

• Items de Réglage

1. Réglages de décalage d'alignement et de mise au point
2. Vérification de la puissance du LD (diode au laser)
3. Réglage de varrouillage de mise au point et de l'axe
4. Réglage de la mire
5. Réglage de l'équilibre d'alignement
6. Réglage tangentiel
7. Réglage du gain de mise au point
8. Réglage du gain d'alignement
9. Réglage de la fréquence de fonctionnement libre VCO

• Equipement de mesure

1. Oscilloscope de trace double
2. Indicateur de puissance optique
3. Disque d'essai (YEDS7)
4. Filtres de réglage de mise au point et d'alignement
5. Filtre passe-bande de réglage du gain de boucle
6. Générateur de signal
7. Tournevis de mire
8. Autres équipements de mesure d'usage courant

• Mode d'essai

Les réglages du lecteur de disque s'effectuent en mode d'essai.

Procédures de réglage et d'annulation du mode d'essai

- (1) Mettre en route le commutateur POWER (ALIMENTATION) (S401) tout en pressant le commutateur TEST MOE (MODE D'ESSAI) (SI).
- (2) Puis, mettre en route le commutateur MANUAL SEARCH FWD (RECHERCHE MANUELLE EN AVANT) (<<) ou le commutateur REV (MARCHE ARRIERE) (>>) pour mettre en fonction le mode d'essai.
- (3) Le mode d'essai est annulé en mettant hors de service le commutateur POWER.

Les diverses fonctions des touches au cours du mode d'essai sont indiquées dans le tableau 11-1.

• Commandes de Réglage

- VR2: Décalage d'alignement (TR, OF)
 VR3: Gain de mise au point (FO, GA)
 VR4: Gain d'alignement (TR, GA)
 VR5: Equilibre d'alignement (TR, BL)
 VR6: Décalage de mise au point (FO/OF)
 VL1: Fonctionnement libre VCO (bobine VCO)

Fig. 11-1 Points de réglage

Au cours du mode d'essai, chaque mécanisme d'asservissement peut être fermé ou ouvert à travers des opérations différentes. Par conséquent, chaque mécanisme d'asservissement doit être fermé un à la fois (en séquence de série) pour régler le

mode de reproduction. Il faudrait remarquer que le mode de reproduction n'est pas mis en fonction en pressant tout simplement la touche de PAUSE () au cours du mode d'essai.

Exemple: Commuter du mode d'arrêt au mode de reproduction.

- Les mécanismes d'asservissement fonctionnent conformément à la séquence de série au cours du mode d'essai.

Fonctions des touches en mode d'essai

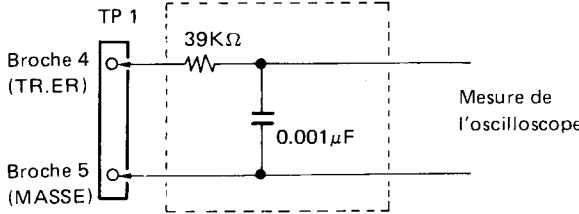

Symbole	Touche	Fonction durant le mode d'essai	Description
	TRACK FWD (Alignement en avant)	Mécanisme asservissement fermé	La diode laser s'allume, l'actionneur de mise au point se déplace vers le haut/le bas, et le mécanisme d'asservissement de mise au point se ferme.
	PLAY (Reproduction)	Mécanisme d'asservissement fermé	Mécanisme d'asservissement fermé en mode CLV-A après avoir démarré de moteur de l'axe.
	PAUSE	Mécanisme d'asservissement d'alignement fermé/ouvert	Le mécanisme d'asservissement se ferme en pressant le tumbler et le lecteur est commuté en mode de reproduction (avec les mécanismes d'asservissement de mise au point et de l'axe fermés). Le voyant PAUSE s'allume et le mécanisme d'asservissement est ouvert en pressant une deuxième fois.
	MANUAL SEARCH REV (Recherche manuelle en marche arrière)	Marche arrière du chariot (vers le centre du disque)	Le chariot est déplacé vers le centre du disque à une vitesse élevée d'environ 1 cm/seconde. Comme il n'y a aucun mécanisme de sécurité pour arrêter le chariot, ne pas le déplacer trop loin.
	MANUAL SEARCH FWD (Recherche manuelle en avant)	Marche avant du chariot (vers le bord du disque)	Le chariot se déplace vers le bord du disque à une vitesse élevée d'environ 1 cm/seconde. Comme il n'y a aucun mécanisme de sécurité pour arrêter le chariot, ne pas le déplacer trop loin.
	REPEAT (Répétition)	L'objectif se déplace vers le haut/le bas.	La diode laser s'allume, et l'actionneur de mise au point est déplacé vers le haut/vers le bas. Le mécanisme d'asservissement de mise au point n'est pas fermé.
	STOP (Arrêt)	Arrêt	Tous les mécanisme d'asservissement sont arrêtés et réenclenchés à l'état d'origine.
	OUVERT/FERME	(Plateau de disque)	Le plateau de disque est ouvert/fermé. Il faudrait remarquer que le pick-up ne retourne pas sur le support du bras de pick-up quand le plateau est ouvert, et reste sur la même position lorsque le plateau est fermé.

11. AJUSTE

Los ajustes del Tocadiscos Compacto se ejecutan en el siguiente orden:

● Items de Ajuste

1. Ajustes de desalineación y desenfoque.
2. Verificación de energía del LD (diodo láser)
3. Verificación del seguro del foco y del seguro del eje
4. Ajuste de la mira
5. Ajuste de equilibrio de alineación
6. Ajuste tangencial
7. Ajuste de ganancia de foco
8. Ajuste de ganancia de alineación
9. Ajuste de frecuencia de operación libre VCO

● Equipo de Medición

1. Osciloscopio de alineación dual
2. Medidor de energía óptico
3. Disco de prueba (YEDS7)
4. Filtros de ajuste de foco y alineación
5. Filtro de paso de banda para ajuste de ganancia de bucle
6. Generador de señales
7. Colocador de mira
8. Otros equipos de medición de uso común

● Modo de prueba

Los ajustes del tocadiscos se llevan a cabo en el modo de prueba.

Procedimientos de colocación y cancelación del modo de prueba

- (1) Encender el conmutador POWER (ENERGIA) (S401) mientras se presiona el conmutador TEST MODE (MODO DE PRUEBA) (S1).
- (2) Luego, encender el conmutador MANUAL SEARCH FWD (BUSQUEDA MANUAL HACIA ADELANTE) (▷▷) o el conmutador REV (REVERSA) (◁◁) para activar el modo de prueba.
- (3) El modo de prueba se cancela colocando el conmutador POWER en la posición apagado.

En la Tabla 11.1 se listan las variadas funciones de tecla.

● Controles de ajuste

- VR2: Desalineación (TR. OF)
- VR3: Ganancia de foco (FO. GA)
- VR4: Ganancia de alineación (TR. GA)
- VR5: Equilibrio de alineación (TR. BL)
- VR6: Desenfoque (FO. OF)
- VL1: Operación libre de la VOC (bobina VOC)

Fig. 11-1 Puntos de ajuste

Durante el modo de prueba cada mecanismo servo puede ser abierto o cerrado mediante operaciones separadas. En consecuencia cada servo debe ser cerrado, de a uno a la vez (en secuencia

serial) para regular el modo tocar. Notar que el modo tocar no se activa por la simple presión de la tecla PAUSE (PAUSA) (□□) durante el modo de prueba.

Ejemplo: Cambiar desde el modo detenido al modo tocar.

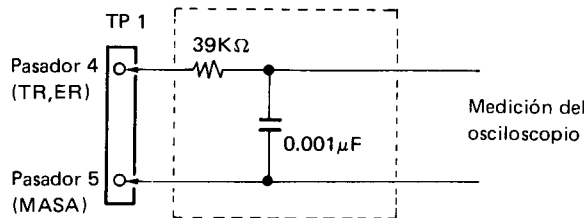

- Los mecanismos servo cumplen con un secuencia serial durante el modo de prueba.

• Funciones de teclas en el modo de prueba

Símbolo	Tecla	Función durante el modo de prueba	Descripción
▷▷	TRACK FWD (ALINEACION HACIA ADELANTE)	El servo del foco se cierra.	El diodo láser se enciende, el accionador del foco se mueve hacia arriba/abajo, y el servo del foco se cierra.
▷	PLAY (TOCAR)	El servo del eje se cierra.	El servo del eje se cierra en el modo CLV-A después que el motor de la aguja es arrancado.
□□	PAUSE (PAUSA)	Servo de alineación cerrado/abierto.	El servo de alineación se cierra presionandolo por palanca, y el tocadiscos es puesto en el modo tocar (con los servos de foco y eje cerrados). El indicador PAUSE se enciende y el servo de alineación se abre al presionarlo por segunda vez.
◁◁	MANUAL SEARCH REV (BUSQUE MANUAL EN REVERSA)	El carro se devuelve (hacia el centro del disco).	El carro se mueve hacia el control del disco a una velocidad rápida de aproximadamente 1 cm/seg. Como no existe mecanismo de seguridad para detener el carro, cuidese de no moverlo demasiado hacia el centro.
▷▷	MANUAL SEARCH FWD (BUSQUEDA MANUAL HACIA ADELANTE)	El carro se mueve hacia adelante (hacia el borde del disco).	El carro se mueve hacia el borde del disco a una velocidad rápida de aproximadamente 1 cm/seg. Como no existe mecanismo de seguridad para detener el carro, cuidese de no moverlo demasiado hacia el centro.
□	REPEAT (REPETIR)	El lente se mueve hacia arriba/abajo.	El diodo láser se enciende y el accionador del foco se mueve hacia arriba/abajo. No se cierra el cervo del foco.
□	STOP (PARAR)	Parar.	Todos los servos se detienen y se recolocan en su estado inicial.
△	CERRADO/ABIERTO	(Bandeja de discos) abierta/cerrada.	La bandeja de discos está abierta/cerrada. Notar que el brazo de fonocaptor no regresa al soporte del brazo cuando la bandeja se abre, y permanece en la misma posición al cerrar la bandeja.

12. FOR KC, HEM and HB TYPES

- Model PD-6010/KC, HEM and HB are the same as the PD-6010/KU with the exception of this supplement.

Contrast of Miscellaneous Parts

Mark	Symbol & Description	Part No.			
		PD-6010(BK)/KU	PD-6010(BK)/KC	PD-6010(BK)/HEM	PD-6010(BK)/HB

Line Voltage Selection for HEM and HB Types

- Disconnect the AC power cord.
- Remove the bonnet case.
- Change the connection of the power transformer primary lead wires as follows:
220V: Connect the blue lead wire to the TRANS 2 terminal on the primary board assembly and connect the violet lead wire to the TRANS 1 terminal.

- 240V: Connect the blue lead wire to the TRANS 1 terminal on the primary board assembly and connect the violet wire to the TRANS 2 terminal.
- Stick the line voltage label on the rear panel.

Description	Part No.
220V label	AAX-193
240V label	AAX-192

- For KC Type

- For HEM and HB Types
